Download

Month Calendar X64 [Latest]

----- This small app lets you view and work with your personal calendar. You can add or edit reminders for events, set different themes to match your taste and configure all of its features. Windows PC only. Download links are provided at the bottom of the page. The main reason why I started my blog was to share my PHP/MySQL game development experience with others. So here it is - the first ready-made complex PHP/MySQL game! Overview: ----- Taste of Darkness is a high-quality, free tactical fantasy RPG, based on well-known Russian fantasy novel, by Grigori Gorin. Many of users don't need to know the Russian original, since Taste of Darkness is readable in three different languages - English, Russian and Polish. I am using all the database tables to store game entities, and SQL queries to retrieve them. It is important for me to do so, because it makes creating entity and function descriptions much easier. It is also easy to use full MySQL features, allowing to create user accounts, manage all kinds of user profiles, etc. User accounts are based on user table in MySQL. This is a good thing, since it allows easy management of users. After creating a player's database account, I use a second table to store game stats, and I use another table to store game objects. After that, I add a player's inventory items. Taste of Darkness supports a limited number of game entities. For example, I am not allowing 50 types of magic item, 12 types of weapon, 8 types of armor, so on and so forth. But that is because I am using a query to retrieve more than 3000 types of items for a hero in a single run. The way of collecting all items is explained in my articles, I am not going into details here. I am also not mentioning items and monsters classes. You'll learn all of this at your own risk. Taste of Darkness is a proprietary game. That means you need a client license in order to play it. Client license is optional, and you may choose to download it from the website. You may optionally download client for Windows and Mac. This is good news for Mac users, because Taste of Darkness is still supported and I am adding new features to it. Mac users may also need their own license to play it, but it is an optional thing too. I'll add more features in the future to make
Tod Darkness more

Month Calendar [2022-Latest]

... This free Internet tool can help you a lot with Twitter search, manage your Twitter followers, check your stats and find new friends. SocialFacts is a free service to help you get the most of your Twitter account. In a very simple and attractive interface, you may follow/manage your Twitter user name, filters, lists and super accounts, check your stats (e.g. followers, friends, tweets per day), favorite tweets, be notified of specific mentions (e.g. @Yahoo, @YahooWidgets, @blogs, etc.) The twitter timeline can be visualized with tabs and a list/grid display. Lists can be shared directly from the interface or imported from FBConnect/Twitlonger, or edited in a specific way (e.g. by

applying/enabling/removing keywords, hide super accounts, hide others). Statistical charts let you quickly see and analyze your favorite tweets and users. The database also integrates the most common search queries for Twitter. SocialFacts may integrate any program (e.g. OMD Tabs, Yahoo! Widgets, iGoogle, etc.) that allows you to view Twitter timelines. ...
